3. Gaps and Impact

a. Wait list data:

b. Number of people estimated to be eligible for services:

- c. **Global impact of services:** There are substantial differences in government health services and independent living services for people with selected disabilities. For example Deaf-Blind, Blind, and Deaf persons do not get selected services that are available to other persons with disabilities under Title XIX and Medicare. The supported employment concept assumes that all persons, regardless of the degree of their disability, have the capacity and should be afforded the opportunity to engage in competitive employment with appropriate support services. The scope of supported employment services vary based on the amount, intensity, and kind of support needed by each individual. Supported employment offers more than just the assistance needed to obtain employment. It provides the necessary on-going support to help an individual maintain employment. According to a recent review, the most promising development in the vocational rehabilitation field during the past decade has been the supported employment (SE) movement. SE emphasizes competitive jobs in integrated work settings with follow-along supports.
