IF YOU ARE UNABLE TO ATTEND BUT WOULD LIKE TO SCHEDULE A PRESENTATION/DEMONSTRATION AT YOUR FACILITY PLEASE CONTACT US at

michaelkozelski@aol.com or call 202.957.8012

WHO:

The water utility is taking the lead on informing those who need to know and those who should know about his vulnerability. Representatives from fire department, police department, the city manager's office or the city council should be in attendance.

WHAT:

A 1 hour class on the threat, vulnerability and mitigating solution will be held before demonstrating how to install the Davidson Valves in working city hydrants. THESE WILL BE THE FIRST VALVES IN THE STATE OF ARIZONA.

WHY:

Although the water utility takes the lead on the mitigation a layered approach to security is required. The Bioterrorism Preparedness and Response Act of 2002 requiring a vulnerability assessment also required the plans to include methods, means and equipment to negate or mitigate those vulnerabilities. This includes FIRE HYDRANTS.

The fire hydrant is the most visible, vulnerable and accessible place in a water distribution system. The ease of access needs to be understood because the LEGAL LIABILITY of something happen will affect all associated in the industry. We receive new information regularly on threats from government agencies regarding contamination. It IS EYE OPENING and it will be shared.

I will be sending reminders as the date approaches we hope to see you there.
