Approved by the Maricopa Association of Governments Regional Council, July 27, 2011

Methodology for Preparing July 1, 2010 Municipality Population Updates

1. Prepare Census Data

Using the Census 2010 as the Base, determine the April 1, 2010 total population for each jurisdiction.

2. Collect New Data

Obtain birth and death data from the Arizona Department of Health for Second Quarter 2010, for Maricopa County. Geocode birth and death data to obtain the total number of births and deaths for each jurisdiction.

Obtain annexed and de-annexed housing unit data from member agencies. Determine population change from annexations/de-annexations using persons per occupied housing unit and occupancy rates.

3. Calculate July 1, Resident Population

Calculate household population for each jurisdiction by adding the total number of births to the Census 2010 population, subtracting the total number of deaths and adding the annexed population.

This method assumes that all population changes from April 1, 2010 to July 1, 2010 resulted from births and deaths and that there is no net migration during this time.
