Project Description
(Provide a brief description of the project area and the need for this retiming)

FY 2021 MAG TRAFFIC SIGNAL OPTIMIZATION PROGRAM - PROJECT APPLICATION FORM -

Number of Intersections

NOTE: Traffic interchanges should be counted as two (2) intersections.

Number of Time of Day Plans

The MAG estimated average cost of retiming an signalized intersection is \$1,000 per intersection per time of day plan, including the turning movement counts. The MAG estimated average cost of collecting turning movement counts is \$200 per intersection per time of day plan. These estimates are based on past completed TSOP project budgets.

Estimated Cost

A map identifying all intersections included in the project will be provided as a separate attachment to this application. (Check box)

*Custom Estimated Cost

**If the "Estimated Cost" calculated does not accurately estimate the anticipated effort required for this project, please enter anticipated estimate.*

If providing a Custom Estimated Cost, please provide reasoning and assumptions to estimated cost.

NOTE: As a separate attachment, provide any additional information that would supplement the application describing the existing conditions of the corridor, such as LOS, traffic flow characteristics, identification of nearby activity centers. For a multi-agency project, describe the regional significance of the project.
