

THE SPINE STUDY

The Interstate 10/Interstate 17 Corridor Master Plan Study is a proactive effort to anticipate and respond to future traffic needs along the I-10 and I-17 corridor. This corridor has been named the "Spine," because it serves as the backbone for transportation in the metropolitan Phoenix area.

The Spine Study will investigate long-term options to improve travel mobility using a combination of traditional methods, new technology and increased use of transit (such as buses). The intended outcome of the Spine Study will be a detailed strategy to manage traffic along the I-10 and I-17 corridors through 2040.

The study is conducted by the Maricopa Association of Governments (MAG), in partnership with the Federal Highway Administration (FHWA) and the Arizona Department of Transportation (ADOT).

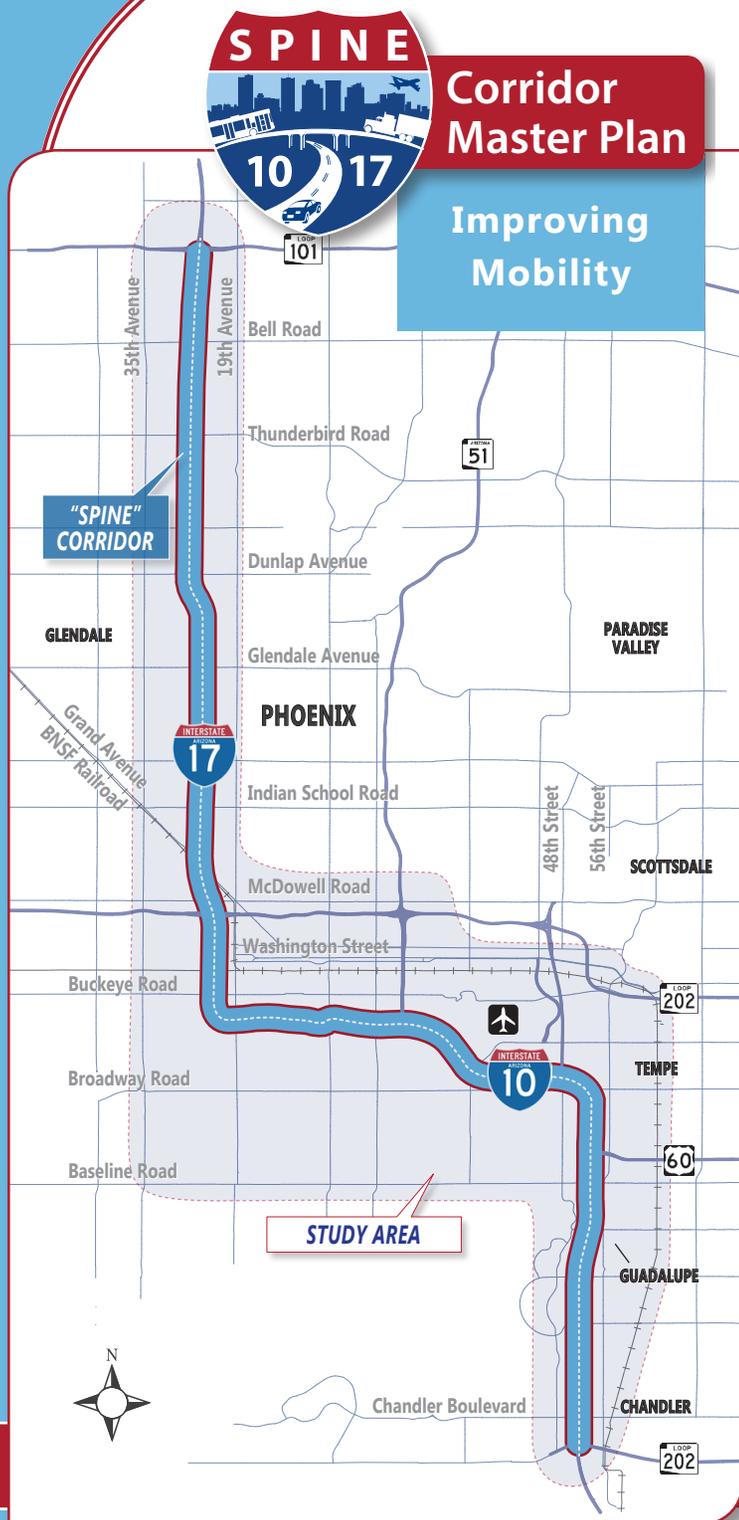

DID YOU KNOW?

Over
40%
of ALL daily
freeway travel
uses the
Spine Corridor.

STUDY GOALS

- Identify future transportation needs in corridor.
- Develop a plan to accommodate future needs.
- Create a strategy for implementing the plan.

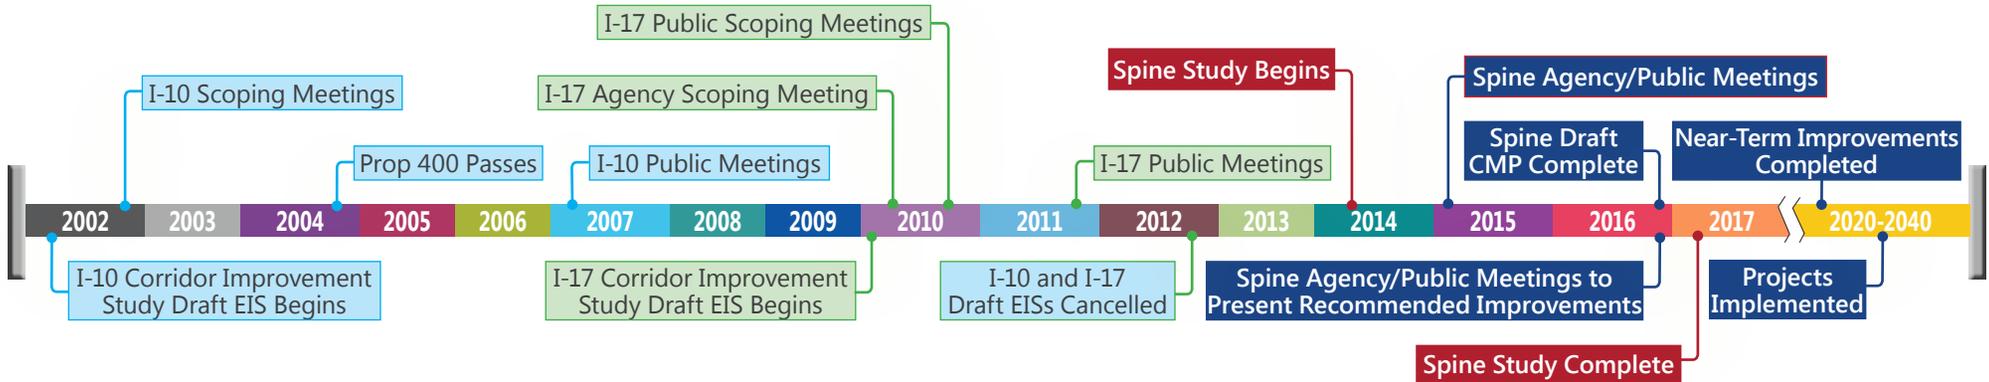

STUDY HISTORY

The Spine Study will integrate information gathered during two previous studies conducted over the past decade. Additionally, ADOT has identified several smaller improvements along I-10 and I-17 (known as near-term improvements) that will be implemented while the Spine Study is underway.
